This book analyzes the current trends in the production, dissemination, and use of knowledge which contribute to social inequalities, especially in the Global South. The aim of the text is to explore the possibilities of active involvement by universities in the democratization of knowledge - a process by which people will be able to more easily acquire and utilize knowledge, as well as the results and benefits of research and development. Combining higher education, research, and knowledge utilization is what universities *should* be doing. When they efficiently contribute to overcoming inequality and underdevelopment, they may be considered developmental universities. They should not function in solitude with privileged elites alone, but in the context of "inclusive innovation systems."

"This book offers a compelling, powerfully argued, and much needed rethink of the role of knowledge production in meeting the double challenge of reducing inequality and confronting a wide range of profound environmental issues such as climate change. The authors situate interactive learning amongst a wide range of actors, including experts, government officials, business people, and citizens—at the heart of a required democratisation of knowledge production. This has huge implications for the core mission of universities."

—**Johan Schot**, Director of the Science Policy Research Unit at the University of Sussex, UK

"This book offers a timely and valuable perspective on the complex relationship between knowledge, power, and social inequalities. It unpacks the role that universities can play in advancing inclusion in developing countries."

—**Erika Kraemer-Mbula**, Associate Professor at the University of Johannesburg, South Africa, and Researcher at the DST-NRF Centre of Excellence in Scientometrics and Science, Technology and Innovation Policy
